

Accomplished in the meeting:

- Created the layout for the databases, userinfo/userlogin/area/posting/message
- Yi Wu created a user profile beforehand which we will use as the initial page to see user info
- Assigned people to different website pages, so we can get rough pages in order to test the database

Goals for next meeting on Friday/Saturday:

- Database created and prepared to be incorporated into the website
- The login/register/user page/home page/posting page/area listing page or sidebar, all should be usable for testing the database (buttons for updating and navigation).
- Have an ER diagram created
