

Accomplished in the meeting:

- Did some debugging of all the databases so that they would work correctly with the sample data that we generated.
- Discussed what we want for the rough designs of the web pages that we will need in order to test the databases and the website in general.

Goals for next meeting:

- Have functional pages made up for all parts of the website, they don't have to be final visually, but contain all buttons/links/features we need to test functionality. Pages that need to be completed include the home page, login, registration, locations, navigation sidebar, postings, and user profile.
- Begin linking the database to website features once the pages are created and functional.
